ALX AFRICA(Students)

Table Of Contents

To the whole ALX community we like to thank the opportunity they giving us. Nelson Mandela once said "Education is the most powerful weapon which you can use to change the world".

The aim of starting the group and the repo is to help each other as ALX students to study and be together on climbing the same ladder. The days have been allocated and voted by the group of alx students from different locations to accommodate everyone.

The most red flag that has been identified under ALX SE is plagiarism which has affected people. We first like to applaud and giving gratitude's to ALX SE team for developing and releasing KIMBA live. To people who doesn't know what is Kimba, it is a programme which is developed to help both ALX students and ALX SE team who are working tired less to help Africa grow more programmers. The introduction of Kimba took people by surprise and some were affected they ended up deferring others getting holds on their accounts. ALX SE is a strict department and they **Do not tolerate plagiarism**.

To ALX students let us work together and create a strong community which provides efficient work and do not forget **DO HARD THINGS**.

Introduction

The repo and group created will be also monitored by other ALX students, it will be containing the following a README file which will be updated regularly for any changes happening, Notes which will be uploaded in form of links and documents, Exercises which will also be uploaded same as notes.

We will be getting tasks which will be done on weekends and then on any day which will be voted by all students we go to solutions and on how to tackle hard parts it is the same as an PLD(peer learning day). The classes will be done live on google meets on the days allocated per README file on GitHub, anyone is allowed to ask and give answers at anytime by talking with the leaders to update any changes they wish to be done.
